Architectural, Mechanical and Electrical Component Seismic Design Requirements

The seismic design requirements of the 2005 Oregon Structural Specialty Code, Section 1621 requires that architectural, mechanical, electrical and nonstructural systems, components and elements permanently attached to structures, including supporting structures and attachments, and nonbuilding structures meet the requirements of Section 9.6 of ASCE 7.

Details showing the bracing/seismic supports shall be submitted for plan review that show how equipment is to be seismically braced for architectural, mechanical and electrical components.

Please contact the Medford Building Safety Department if you have any questions regarding this issue.
