Joining a Zoom Meeting from an iOS Device

1. In order to launch the Zoom meeting, you will need to make sure you have the Zoom app installed on your iOS device. Search for the Zoom app and download and install it if you do not already have it on your device. The app is called **ZOOM Cloud Meetings** and has the below icon:

2. Once you've installed the app, navigate to the email invite you received from the Zoom system from your iOS device.

3. Click/tap the "Click Here to Join" link from within the email.

4. A window will pop up asking you if you want to '*Open this page in "Zoom"?* Select **Open.**

5. If you receive a popup notifying you that Zoom would like access to your microphone, select **OK.**

6. If you receive a popup asking if you would like to allow Zoom to send notifications, select the option that best suits your preferences. You do not need notifications in order to attend the meeting.

7. You will then be asked how you would like to join audio. Select **Call using Internet Audio.**

8. You are now in the meeting. If you tap the screen, options will appear for you at the top of your screen. The important one to note is the microphone icon, which is your **Mute** and **Unmute** control. By default, the microphone icon should have a slash through it, indicating that you are muted. When you are ready to speak, you will tap the icon once to unmute yourself.

9. When you are done with the meeting, tap the screen and select **Leave Meeting** in the upper left-hand corner of the screen.
